Astana IT University · Business Administration · 2nd attestation

Assignment 4: Appendix

Week 8 calculations and discrepancy audit · Week 9 Career Capability Portfolio

Kniazev Daniil · Group AIB-2602 · 25 October 2026

Company A: Carrefour · Company B: Magnum Cash&Carry

A. Week 8: Magnum ratios and discrepancy audit

Data. Magnum Cash&Carry is a private partnership. I found no published balance sheet, income statement or cash-flow statement, so liquidity, profitability, activity and debt ratios cannot be calculated. Forbes Kazakhstan's rankings of the largest private companies give revenue and headcount; net profit is "no data" in the 2024 and 2025 rankings [1], [2]. Earlier years appear only on Forbes's company profile [13].

Formulas. Revenue per employee = revenue ÷ employees. Nominal change = revenue(t) ÷ revenue(t−1) − 1. Real change = [revenue(t) ÷ (1 + inflation(t))] ÷ revenue(t−1) − 1, using annual inflation of 9.8% for 2023 and 8.6% for 2024 reported from the Bureau of National Statistics [4]. December-on-December inflation is used as an approximation of the average price change in the year.

Table A1 · Revenue, headcount and revenue per employee by fiscal year

Fiscal year	Ranking (published)	Revenue, bn ₸	Employees	Revenue per employee, m ₸	Revenue change	Status
2021	Dec. 2022	344.96	12,466	27.67	—	Profile only [13]
2022	Dec. 2023	463.10	13,509	34.28	+34.2% nominal	Profile only [13]
2023	11 Dec. 2024	480.00	10,000	48.00	+3.6% nominal, −5.6% real	Methodology checked [2]; headcount rounded
2024	8 Dec. 2025	453.13	9,599	47.21	−5.6% nominal, −13.1% real	Methodology checked [1]

Fiscal years follow the rankings' methodology: the 2025 ranking uses 2024 revenue [1] and the 2024 ranking uses 2023 revenue [2]. Rows marked "Profile only" were read from the company profile, whose underlying ranking methodology I could not open; they are context, not evidence, and the changes for 2022 and 2023 rest on them as base years. The 2023 headcount of 10,000 is the same round figure Magnum's careers site gives for its whole workforce [3].

Table A2 · Discrepancy audit

No.	AI-supported interpretation (quoted)	Independent check	Outcome
1	Notes that the page labels figures by ranking year, then says headcount dropped "between 2023 and 2025"	The 2025 ranking uses 2024 revenue and the 2024 ranking uses 2023 revenue [1], [2]	Corrected: every year moves back by one; the comparison is fiscal 2022 to 2024
2	Revenue per employee rose to 47.2 m ₸, "a sign of higher productivity"	The largest jump (+40.0%) falls in 2023, whose headcount is a round 10,000 [2], [3]; Forbes says it estimates missing data [1]	Rejected for 2023; 9,599 (2024) is the only exact recent headcount

No.	AI-supported interpretation (quoted)	Independent check	Outcome
3	Revenue “slipped only about 2%”	Verified years: −5.6% nominal and −13.1% real in 2024 after 8.6% inflation [4]	Qualified: the real fall is larger than the nominal one
4	“The sharp fall from 2016 to 2019 suggests thin margins” (12.27% and 1.18%)	Net profit is “no data” in both recent rankings [1], [2]; the two margins come from rankings published 7–10 years ago [13]	Rejected: profitability is a data gap, not a trend
5	Growth and revenue-per-employee arithmetic; headcount change “cannot be attributed to any technology”	Recalculated independently: identical to two decimals (for example 453,130 ÷ 9,599 = 47.21)	Agreed: no correction needed

Where human judgment was and was not required. The arithmetic needed no correction. Every discrepancy concerned the period, a rounded figure, inflation or missing data, and was resolved by reading the source methodology. Scope is a further open question: Kaspi bought control of Magnum’s e-commerce business in 2023 [1]; without statements, its effect on these figures cannot be measured.

> AI-supported interpretation audited above (excerpt, as produced): “Revenue per employee rose from about 19.5 mn to 47.2 mn tenge, a sign of higher productivity, while headcount dropped about 29% from 13,509 to 9,599 between 2023 and 2025 as revenue slipped only about 2%. Profitability is visible only for 2016 (12.27%) and 2019 (1.18%), so the page cannot show whether margins have held up, though the sharp fall from 2016 to 2019 suggests thin margins. The page does not mention automation or AI at all, so the headcount reduction cannot be attributed to any technology.”

B. Week 9: Career Capability Portfolio

The map places the four capability groups against the Week 4 operating model, in which Magnum’s category manager keeps final order approval and AI drafts forecasts under human review. Exposure follows the ILO’s finding that clerical work is the most exposed to generative AI [6] and the WEF’s survey of employers [7].

Table B1 · Capabilities by task in the Week 4 operating model

Week 4 task	Human	Business	Digital	Meta	Value for a graduate
Human Only: approve the final order	Accountability; supplier negotiation	Budget, margin and shelf life; reading ratios	Forecast-error dashboards	Deciding under uncertainty and explaining it	High: authority stays with a named person
Human + AI: interpret promotions and unusual demand	Store knowledge; communication	Promotion economics: the deepest discount is not the most useful	Challenging model output	Noticing when the model is wrong	High, and rises as AI output grows
AI Executes with Human Review: draft forecasts and quantities	Attention to detail	Supplier lead times and minimum orders	Spreadsheet and data checks (period, rounding, inflation, scope)	Verification habit	Drafting shrinks, reviewing grows: fewer, better-prepared juniors

Week 4 task	Human	Business	Digital	Meta	Value for a graduate
Automated: data checks and approval logs	—	Process ownership	Data-quality rules and logs	Governance (approval log)	Low in execution, moderate in design
Store customer service, where Carrefour redeploys staff [10]	Empathy; Kazakh and Russian	Service recovery	In-store systems	Resilience	Stable: human interaction shows no substitution potential [7]

Workforce implication. The most exposed entry task is drafting numbers and reports. The capabilities that keep their value are approving, interpreting and verifying, which is where the essay locates the graduate's value. Development priorities for a graduate entering this model: ratio and margin literacy, data checking and explaining a decision to a manager.

C. AI-use declaration

The AI-use declaration is submitted as a separate file.

Source numbers refer to the essay's reference list.
